EDUCATION

June 2019

Bachelor of Science in Computer Science
University of Southern Mindanao, Kabacan,
Cotabato, Philippines

SKILLS

Languages

- PHP
- Java
- HTML
- CSS

Frameworks & Libraries

- Laravel
- Vue.js
- AngularJS
- Bootstrap

Databases

- PostgreSQL
- MySQL

Tools

- Git
- Postman

AI Tools

- Claude
- Cursor
- ChatGPT

PROFESSIONAL SUMMARY

Full Stack Developer with 6 years of experience working inside real production systems — primarily in PHP and Java. Most of my work has been in HR/Payroll SaaS and Banking, contributing to systems that handle payroll for thousands of employees and compliance tools used daily by branch staff. I work well in teams, take ownership of what I'm assigned, and use AI tools where they genuinely help me move faster and think clearer.

WORK EXPERIENCES

FULL STACK DEVELOPER (2020-Present)

R2M IT Solutions, Inc. · HR / Payroll SaaS · ~5 yrs

- Contributed to a production payroll system serving clients from 50 to 30,000+ employees — implementing statutory computation rules aligned with annual government regulatory memos and maintaining compliance across yearly changes.
- Contributed to biometrics file reader that parsed raw hardware attendance exports into structured time logs, handling edge cases across multiple hardware output formats to ensure reliable payroll processing.
- Developed a 1601C Monthly Remittance Report with variance checking; optimized query performance by pre-initializing static payslip data per request, reducing redundant database load for high-volume clients.
- Participated in a major platform modernization — migrating the employee portal from Laravel 5.2 to Laravel 11 and AngularJS to Vue.js; used Claude and Cursor to accelerate identification of deprecated patterns and reduce manual code review cycles.
- Implemented audit trailing across employee records, timesheets, and report modifications, providing a traceable change history that reduced ambiguity in payroll disputes.

IT STAFF (2019-2020)

Partner Rural Bank, Inc. · Banking / Financial Services · ~1 yr

- Designed and delivered four internal compliance and operations web applications — covering Politically Exposed Persons (PEP) flagging, AMLA blacklist cross-referencing, account digitization, and a structured complaint intake system.
- Built the Account Digitization System to convert paper-based branch records into a searchable database indexed by standard bank codes, enabling cross-branch account lookup that was previously unavailable.
- Developed the Complaint & Service Request System to replace informal teller-to-IT contacts with a structured intake process — improving visibility and response handling for account disputes.
- Coordinated directly with branch operations staff to align each application with existing workflows, ensuring adoption without requiring significant retraining of non-technical end users.
